The best value domestic grease trap on the market!

Grease traps are important in prolonging the life of your wastewater treatment system

Oils, Fats and Greases (OFG's) are a significant issue in wastewater treatment systems. It is important for the effective operation and prolonging the life of any waste water treatment system (including the pipework) to trap the OFG's before it progresses through the system. This is done by removing it before complete cooling and solidification.

The removal of OFG's will reduce blockages, improve the performance of a wastewater treatment system and minimise the pollution of ground water and open waterways.

Polylok's newly patented 70ltr domestic grease trap is the solution. It comes with an easy to access chamber with a wide opening to inspect and clean. The lockable dome cover is green to blend into its environment and has integrated handles for easy removal.

Main Benefits:

1. 70Ltr Capacity
2. Supplied with a sealed access (pedestrian rated) cover to contain odours
3. 500mm diameter clear opening provides easy access for maintenance and cleaning (see fig.1)
4. Removeable solids collection sump with handle (see fig.2)
5. Removable inlet and outlet baffles for easy maintenance and cleaning (see fig.3)
6. Durable materials for long life
7. Supplied with 110mm inlet and outlet pipes fitted
