

BUTYL MASTIC JOINT SEALANT

APPLICATIONS & INSTALLATION GUIDANCE

PRIMARY APPLICATIONS:

Concrete Pipe
Septic Tanks
Wet Wells
Box Culverts
Utility Vaults
Burial Vaults
Sanitary & Storm Sewer Manholes
Concrete Wall Panel Systems

SURFACE PREPARATION:

Joint surfaces should be clean and dry. Due to the high adhesive quality of the Sealant, priming of the joint surface is usually not required. In case of wet or unusually demanding applications, it is recommended that an adhesive primer be applied to the joint surface and allowed to dry before application of the Sealant.

INSTALLATION INSTRUCTIONS:

The size required for a specific joint is determined by the annular space resulting in a fully sealed joint. The joint must be coupled with sufficient compression to form a proper watertight seal. The Sealant bonds to joint surfaces and to itself. Always butt ends of preformed sealant together. Leave protective plastic backing on sealant during application and remove when joint is ready for coupling.
